

### Manufacturing Improvement Plans

| Facility:                                      | Improvement Target (Y/N) | Plan description (or reason for no plan) |
|--|--------------------------|--|
| Water conservation                             |                          |  |
| Raw material waste reduction                   |                          |  |
| Waste recycling (recyclables / packaging)      |                          |  |
| Waste segregation and recycling (fibre wastes) |                          |  |
| Recycled raw material sourcing                 |                          |  |
| Rapidly renewable raw materials <sup>(1)</sup> |                          |  |
| Dematerialisation of products                  |                          |  |
| Electrical energy efficiency                   |                          |  |
| Natural gas efficiency                         |                          |  |
| Other fuel efficiencies                        |                          |  |

Please attach improvement plans as appropriate.

<sup>(1)</sup> Rapidly renewable materials are those that can be harvested from sources that can regenerate within 10 years.
